Suggested Proper Cleaning and Storage Instructions

Cleaning Stereotests:

To minimize cleaning, handle the Stereotest by the booklet only; avoid touching the plates of the Stereotest, if possible.

When cleaning is necessary, clean gently using a soft, lint free cloth slightly dampened with 70% isopropyl alcohol. Or a soft, lint free slightly damp 70% isopropyl alcohol wipe can be used.**

Wipe dry with a clean soft, lint free cloth.

Do not spray anything directly on the surface of the Stereotest or allow the Stereotest to become saturated with or become 'wet' with any liquid as this will damage the Stereotest causing it to fade or destroy the image. It can also cause the Stereotest to wrinkle or warp.

Do not spray any liquid directly on the 3D Viewers, clean as above with a soft lint free cloth.

**Never use harsh cleaning products such as bleach, bleach derivatives, sanitizing products or cleaning products designed to clean non porous, hard surfaces or products that require the surface to remain 'wet' as these will damage the Stereotest. Only 70% isopropyl alcohol is recommended.

Please note Stereotests should never be saturated with any cleaning products and should never be 'wet'. Proper cleaning and storage add to the longevity of your Stereotest.

Storage and handling guidelines for Stereotests:

To avoid Stereotest fading, please be aware of the following:

The Stereotests should always be stored in a climate controlled, humidity free, cool, dry place, away from the sun and light sources when not in use; preferably in the original box. Heat and humidity can cause Stereotests to fade, and the plates can wrinkle or warp.

Ambient as well as direct light, heat and humidity may cause fading.

Improperly storing the Stereotest in a car, near a window or heat source, in a hot and / or humid warehouse or room can cause fading, the image to disappear and the Stereotest material to wrinkle or warp.

Leaving the booklet open and exposed to light (sunlight or ambient) can cause fading, wrinkling or warping of the Stereotest. Proper cleaning and storage add to the longevity of your Stereotest.
